

**MISSION STATEMENT**

The Radiologic Technology Program at Cabrillo College prepares a graduate:

- To be clinically competent work in the regional community, the State of California or elsewhere in the United States.
- To develop skills necessary to produce diagnostic radiographic examinations for the maintenance and/or restoration of good health to the patient.
- To perform quality radiographic procedures based on scientific principles, allowing for advances in medical and Radiologic Technology, as well as changes in social needs.
- To be effective through concurrent and progressive learning by classroom theory, laboratory and clinical practicum.
- To provide compassionate care while using therapeutic communication skills, mindful of the patients' dignity and worth and within guidelines set by professional standards.
- To respect the individuality of the patients' diverse cultural, ethnic and religious backgrounds.

**PROGRAM GOALS**

- Students will demonstrate good patient communication.
- Students will be clinically competent.
- Students will participate in professional development/growth.
- Students will demonstrate problem solving and critical thinking skills.
- Graduates will be employed and effective in the community.
