Chemistry A.A. Degree

Chemistry is the study of the properties, composition and transformations of all material substances. It is often called the “central science” since it draws from mathematics and physics and forms a necessary background to the study of the earth sciences and all the biological disciplines, including the various medical professions. A chemistry major is considered excellent preparation for medical school.

As pure scientists, chemists seek to understand ever more complex substances in greater detail. As applied scientists, chemists contribute to the creation and development of thousands of the products that support our complex society. Chemistry is a profoundly experimental science and much of a student’s time will be spent in the laboratory.

A chemistry major usually transfers to a four-year institution to complete a bachelor’s degree. Many also go on to earn Masters or Ph.D.s, since advanced degrees generally lead to more rewarding careers. Cabrillo’s chemistry program is articulated with those of the UC and CSU systems and includes the standard courses needed to complete the first two years of the major.

Verification of prerequisites will be required. Prerequisites for courses in this department are computer enforced. Students should be sure their records have been entered into the Cabrillo computer system before attempting to enroll.

Learning Outcomes

1. Demonstrate mastery of a broad set of chemical knowledge concerning the fundamentals of general and organic chemistry.
2. When presented with a specific problem, formulate a strategy for solving the problem, apply appropriate techniques to arrive at a solution, and interpret their results.
3. Know and follow the proper procedures and regulations for safe handling and use of chemicals.
4. Understand the objective of chemical experiments, properly carry out the experiments, appropriately record and analyze data, and draw meaningful conclusions based on the results.
5. Use standard laboratory equipment, modern instrumentation (including computers for data acquisition), and classical techniques to carry out experiments.
6. Communicate the concepts and results of laboratory experiments through effective writing and/or oral communication using the discipline standards for reporting and citation.

Model Program for Chemistry

These Associate Degrees require 60 units appropriate to your educational goal, to include general education and at least 30 units in a major. Courses should be selected to meet the lower-division major preparation requirements at your intended transfer university - these specific requirements can be found at www.assist.org for 4-year pub-

lic institutions in California. Please see a counselor for advisement to ensure you are taking the best possible courses given your goal. This degree may be completed as a transferable Associate in Science degree with the addition of university admission requirements and increased general education requirements.

The department presents the following suggested Model Programs for this major. The courses listed below may or may not be appropriate depending on your specific goal. Please see a counselor for advisement for transfer to any 4-year institution.
