

Solari Green Technology Center (SGTC)

The Solari Green Technology Center is located on the former site of the Watsonville Public Library, buildings C and D of the Watsonville Center.

Students will learn skills for “green” (energy efficient) construction such as solar technology, renewable/recycled building materials, and construction management.

The SGTC also serves as a teaching facility for the greater community, built to the top level platinum standard in LEED (Leadership in Energy and Environmental Design.) The building showcases several alternative energy systems and is constructed to the latest standards of energy efficient design.

Classes in the SGTC began fall 2012. See the listing of Watsonville Center courses for current offerings in the [Cabrillo College Schedule of Classes](#).
