Green Building Directory

A Guide to Sustainable Building Materials and Methods in Santa Cruz County

Up-to-date listings of services and suppliers offering tools, assistance, and materials for green building.

Funded by the County of Santa Cruz
Department of Public Works Recycling and Solid Waste
and the City of Santa Cruz Planning Department,
in cooperation with Ecology Action
and the County of Santa Cruz Planning Department.

Rev A: July 2007
The Green Building Guide, which offers a broad introduction to green building materials and waste reduction methods, was funded through waste reduction grants from the County of Santa Cruz Departments of Public Works Recycling and Solid Waste and the City of Santa Cruz Planning Department. It provides a basic overview of environmental considerations and an outline of environmentally friendly alternatives to conventional techniques, as well as resources for further investigation.

This directory was created to help the residents of the county close the loop and buy recycled content materials from the businesses in the directory. The County promotes green building because, among other reasons, our County’s landfill has only a few years of capacity remaining and both jurisdictions have adopted Zero Waste goals.

In 1995, the recycling rate in the Unincorporated area of Santa Cruz County was just 21% and the City’s 35%. In 2004, according to data submitted to the California Integrated Waste Management Board, Unincorporated Santa Cruz County was recycling at a rate of 58% and the City at 56%.

While this is impressive progress, it only buys us a little more time to solve the problem. Unincorporated County and City residents and businesses need to work together and establish a very strict goal in order to manage solid waste responsibly and extend the life of our landfill for as long as possible. Construction/demolition waste constitutes a very large percentage of the County and City’s disposed waste, and widespread practice of green building will reduce that volume significantly. Each of us has a stake in preserving resources for future generations, and by our own actions, each of us can make a difference.

The County and City of Santa Cruz do not necessarily endorse or recommended the services or products listed in this Directory. The County and City of Santa Cruz offer this directory as a supplement to the Green Building Guidelines to assist you with brief profiles of local businesses that offer services and materials to help you plan your green building projects. This directory was developed in collaboration by Ana Maria Rebelo of Santa Cruz County, Victor Aguiar, Karsten Mueller, and Louis Landolph of Ecology Action, and Marilyn Crenshaw of The Green Architect.

matt.golden@sustainablespaces.com
Sustainable Spaces approaches your home as a holistic system, applying building science to identify specific steps that will improve its comfort, indoor air quality and energy efficiency. We have developed a holistic approach to home performance contracting that treats the home as a system. Our experience in a wide range of home improvement technologies and contracting allows us to identify the best and most cost effective approach for customers to get the most out of their home improvement dollar.

421 Castro Street
Mountain View
(650)-694-6200
www.voxdesigngroup.com
randy@voxdesigngroup.com
Design of custom green homes that include passive heating and cooling elements, energy efficient systems, healthy indoor air quality by using no voc paints or off gassing adhesives, and engineering that features material saving and efficiency methodologies.

Wilke Design
Felton
(831)-427-3008
dwilke@cruzio.com
Residential remodel design - home remodel, additions, kitchen and bath design and permit processing - with a focus on sustainable building practices using healthy and sustainable materials.
Diana Wilke, CGBP 2006.

William de Ess Studios
719 Swift Street #12
Santa Cruz
(831)-426-8941
wmgs@pacbell.net
We identify the most cost effective green features in a project specific manner and always design to maximize structural efficiencies and spaces that are flexible. Passive heating and cooling is recommended where appropriate. We specialize in the restoration and rehabilitation of historic structures, with an emphasis on interiors. We also have developed a zero VOC interior finish that is a lower cost alternative to clay-based paints or plaster finishes.
David Subocz, CGBP 2007

INDOOR AIR QUALITY

Sloan Environmental
