As the Instructor for this class, I am expected to...

- Hold class regularly. Come prepared to explain the class topics in a clear and organized fashion, anticipate/receive appropriate student questions and answer them in a clear and respectful manner.

- Maintain an atmosphere in the classroom that is conducive to the exchange of information and ideas.

- Fairly, and without bias, evaluate the performance of each student in the class.

- Make myself available to all students during office hours to discuss any aspects of the course, course material, or their educational goals.

- Be a cool guy who has studied more math than you can imagine (and survived ... mostly sane) and can explain it to people in an enthusiastic, meaningful, and respectful way.
